Seed pests threaten food security

e.g.:  
ToBRFV  
*Magnaporthe oryzae* MoT

Methodology:  
a science-based decisional scheme

**Future challenges:**  
R&D, Pest Risk Analyses, Risk management

Diagnostics, detection or treatment methods; breeding  
Investigation of seed transmission  
Valuable resource for NPPOs and policymakers

23 hosts ■ 333 seed-borne pests ■ 145 “seed pathway” ■ 558 scientific references

fungi oomycetes myxomycetes	bacteria nematodes viruses viroids
